22. (a). A commodity is to be supplied at a constant rate of 200 units per day. Supplies of any amount can be had at any required time, but each ordering costs Rs. 50 ; cost of holding the commodity in inventory is Rs. 2.00 per unit per day while the delay in the supply of the item induces a penalty of Rs. 10 per unit day. Find the optimal policy $(Q, t)$, where $t$ is the reorder cycle period and $Q$ is the inventory level after reorder.
(b). The annual demand of a product is 10,000 units. Each unit costs Rs. 100 if orders placed in quantities below 200 units but for orders of 200 or above the price is Rs. 95 . The annual inventory holding cost is 10 percent of the value of the item and the ordering cost is Rs. 5 per order. Find the economic lot size.
