## LOYOLA COLLEGE (AUTONOMOUS), CHENNAI - 600034

B.Sc. DEGREE EXAMINATION - STATISTICS

FIFTH SEMESTER - NOVEMBER 2007
ST 5503-COMPUTATIONAL STATISTICS

Dept. No. $\square$ Max. : 100 Marks

## ANSWER ANY THREE QUESTIONS.

1.(a) For the following data:

| Commodity | Base year |  | Current year |  |
| :--- | :--- | :--- | :--- | :--- |
|  | Kg. | Rate(RS.) | Kg. | Rate(RS.) |
| Onion | 12 | 14 | 15 | 18 |
| Meat | 10 | 160 | 12 | 200 |
| Sugar | 15 | 12 | 18 | 20 |
| Coffee | 10 | 160 | 16 | 220 |
| Oil | 12 | 55 | 15 | 80 |

Find (i) Laspyre (ii) Paasche (iii)Dorbish-Bowley (iv) Marshall-Edgeworth and (v)Fisher price and quantity index numbers. (10 marks)
(b) Fit a trend line by the method of least squares for the following data:

Year : $19901991 \quad 19921993199419951996199719981999$
(Annul Profit in crores): $\begin{array}{lllllllllll}10 & 12 & 16 & 22 & 26 & 28 & 31 & 34 & 38 & 44\end{array}$
Also estimate the trend values for the years from 2000 to 2005 .Further compute 3 year and 4 year moving averages.
(14 marks)
(c) The demand for a particular spare part in a factory was found to vary from day-to-day.

In a sample study the following information was obtained:

| Day | : Mon. | Tue. | Wed. | Thu. | Fri . | Sat. |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| No.of parts demanded : 1124 | 1125 | 1110 | 1120 | 1126 | 1115 |  |

Test the hypothesis that the number of parts demanded does not depend on the day of the week. Use .01 significance level.
(10 marks)

## [OR]

(d) Calculate the monthly seasonal indices for the three years of expenses for a six-unit apartment house in southern Florida as given here. Use a 12 -month moving average calculation.

| Month | $\mathbf{y 9 9 5}$ | Expenses <br> Ja96 | $\mathbf{1 9 9 7}$ |
| :--- | :--- | :--- | :--- |
| January | 172 | 182 | 192 |
| February | 182 | 207 | 212 |
| March | 202 | 212 | 232 |
| April | 232 | 247 | 282 |
| May | 242 | 267 | 292 |
| June | 312 | 332 | 392 |
| July | 362 | 402 | 422 |
| August | 292 | 337 | 332 |
| September | 242 | 262 | 292 |
| October | 242 | 272 | 297 |
| November | 232 | 257 | 282 |
| December | 197 | 222 | 252 |

(e) The following table gives probabilities and observed frequencies in four classes $\mathrm{AB}, \mathrm{Ab}, \mathrm{aB}$ and $a b$ in a genetical experiment. Estimate the parameter $\theta$ by the method of maximum likelihood and its standard error.

| Class | Probability | Observed frequency |  |
| :--- | :---: | :---: | :---: |
| AB | $1 / 4(2+\theta)$ | 110 |  |
| Ab | $1 / 4(1-\theta)$ | 29 |  |
| aB | $1 / 4(1-\theta)$ | 32 |  |
| ab | $1 / 4(\theta)$ | 10 | $(14$ marks $)$ |

2(a) The National Association of Home Builders provided data on the cost of the most popular home remodeling projects. Sample data on cost in thousands of dollars for two types of remodeling projects are as follows.

$$
\begin{array}{lcccccccccc}
\text { Hall }: 18.2 & 19.4 & 20.5 & 24.5 & 21.3 & 24.6 & 23.4 & 26.2 & 24.1 & 25.2 \\
\text { Kitchen : } 16.4 & 17.8 & 19.5 & 20.6 & 18.7 & 22.6 & 21.4 & 25.3 & 22.4 &
\end{array}
$$

Set-up a $99 \%$ confidence interval for the difference between the two population means. [10 marks)
(b)Measurements of the fat content (in grams) of two kinds of ice cream, Brand A and Brand B, yielded the following sample data:

| Brand A: | 13.5 | 14.0 | 13.6 | 12.9 | 13.0 | 12.4 | 13.7 | 12.8 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Brand B: | 12.9 | 13.0 | 12.4 | 13.5 | 12.6 | 13.2 | 12.8 | 13.5 |

Test the hypothesis $\mu_{1}=\mu_{2}$ (where $\mu_{1}$ and $\mu_{2}$ are the respective true average fat contents of the two kinds of ice cream ), against the alternative hypothesis $\mu_{1} \neq \mu_{2}$ at 0.05 significance level. (14 marks)
(c) The nicotine content (in milligrams) of two samples of tobacco were found to be as follows:

| Sample A: 24 | 27 | 26 | 21 | 25 | 23 | 27 | 26 | 22 | 28 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Sample B: 27 | 30 | 28 | 31 | 22 | 36 | 24 | 32 | 25 | 21 |

Test whether the two populations have the same variances. Use 0.01 significance level ( 10 marks)

## [OR]

(d) The following is the distribution of the hourly number of trucks arriving at a company's warehouse :

| Trucks arriving per hour: 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |  |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | $: 52$ | 151 | 130 | 102 | 45 | 12 | 5 | 1 | 2 |

Fit a Poisson distribution to the above data and test the goodness of fit at 0.05 significance level.
(14 marks)
(e) 1072 college students were classified according to their intelligence and economic conditions. Test whether there is any association between intelligence and economic conditions at 5\% significance level.

|  | Intelligence |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Excellent | Good | Mediocre | Dull |  |
| Economic conditions | 48 | 199 | 181 | 82 |
| Good | 81 | 185 | 190 | 106 |

(10 marks)
(f) The 1997 price/earnings ratios for a sample of 12 stocks are shown in the following list Assume that a financial analyst has provided the estimated price/earnings ratio for 1998.Using a 0.05 level of significance, what is your conclusion about the differences between the price/earnings ratios for 1997 and 1998 ? Use Wilcoxon signed ranks.

3.[a] The data given below for a small tiger population which exhibits a steady rising trend. Each column represents a systematic sample and rows represent the strata.
i] Calculate sampling variance under systematic sampling [10]
ii] Calculate sampling variance under stratified sampling [10]
iii] Calculate sampling variance for without stratification and without replacement [14]

| Sample Number |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Stratum \# | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ |  |
| I | 4 | 9 | 14 | 20 |  |
| II | 6 | 10 | 17 | 28 |  |
| III | 8 | 12 | 19 | 30 |  |
| IV | 12 | 16 | 22 | 36 |  |

[OR]
[b]. The data given below represent the summary of wheat farm census of all the 1000 farms in a region. The farms were stratified according to farm size (in acres) into five strata. Estimate the sampling variance of the sample mean:
i] When the farms are selected by the method of simple random sampling without replacement. [10]
ii] When the farms are selected by the method of Stratified random sampling with proportional allocation (i.e: $n_{i}$ proportional to $N_{i}$ ).
[10]
iii] When the farms are selected by the method of Stratified random sampling with Neyman optimum allocation( i.e: $n_{i}$ proportional to $\mathrm{N}_{\mathrm{i}} \mathrm{S}_{\mathrm{i}}$ ).
[10]
iv] Compare the efficiency of above method.
[4]

| Stratum Number | Farmsiz (in acres) | No.of farms $\left(\mathrm{N}_{\mathrm{i}}\right)$ | Average Area $\mathrm{Y}_{\mathrm{Ni}}$ | Std. Deviation oi |
| :---: | :---: | :---: | :---: | :---: |
| 1 | $0-50$ | 300 | 16 | 2 |
| 2 | $51-100$ | 250 | 17 | 4 |
| 3 | $101-150$ | 150 | 14 | 3 |
| 4 | $151-200$ | 150 | 15 | 2 |
| 5 | $201-250$ | 150 | 16 | 1 |
